

DAPA - A VAPI BASED AI ASSISTANT

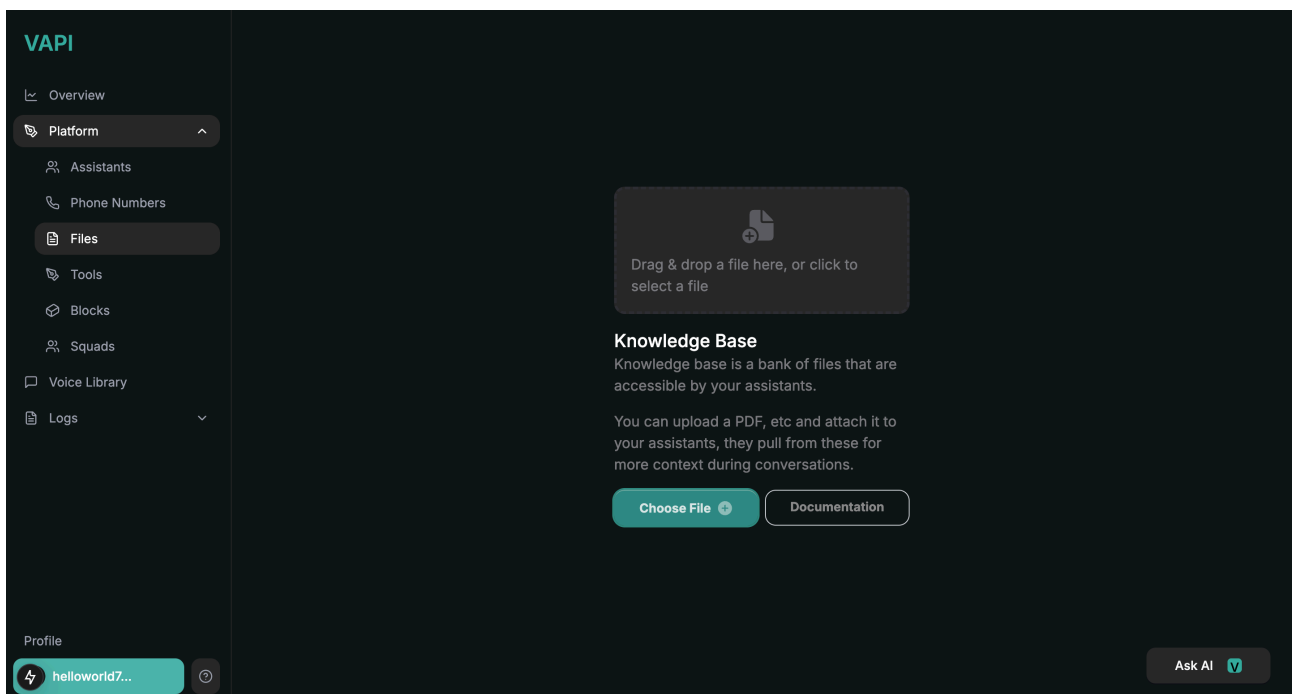

<https://github.com/kartiksolanki-ai>

The screenshot shows the 'New Assistant' configuration page in VAPI. The left sidebar is the same as the Overview page. The main content area is titled 'New Assistant' and includes a 'Create Assistant' button. Below this is a 'Document...' input field. The configuration section includes an 'Assistant ID' (4c95c227-c472-4b3a-...), a 'Mode' dropdown set to 'Web', and two sliders for 'Cost' (~\$0.09 /min) and 'Latency' (~700 ms). Below these are tabs for 'Model', 'Transcriber', 'Voice', 'Functions', 'Advanced', and 'Analysis'. The 'Model' tab is active, showing a 'First Message' field with 'New Order', a 'System Prompt' field with 'This is a blank template with minimal defaults, you can change the model, temperature, and messages.', a 'Provider' dropdown set to 'OpenAI', and a 'Model' dropdown set to 'gpt-3.5-turbo'. There is also a 'Knowledge Base' section with an 'Ask AI' button and a 'Select Files' button.
